Neck and  
throat  
♊  
Breast, sto-  
mach & ribs  
♋  
Bowels and  
belly  
♌  
Secret mem-  
bers  
♍  
Knees

♊  
Arms and  
shoulders  
♋  
Heart and  
back  
♌  
Reins and  
loins  
♍  
Thighs  
Legs

♎ the feet.

The beginning and ending of the Terms.

**T**He first of *Hilary* Term shall be  
On *January* the twentie three :  
And on the twelfth of *February*,  
This Term doth end most certainly.  
And *Easter* Term from *Easter* day,  
The Wednesday for:night 'gins always:  
And when the *Ascension* day is past,  
Till Monday next this Term doth last.  
On Friday after *Trinity*  
This Term begins assuredly :  
And as our Lawyers all do write,  
It ends the Wednesday fortnight.  
If *Michaelmas* Term you seek to find,  
*October* the 23 now bear in mind :  
It ends as I do well remember,  
The twenty eighth day of *November*.

# January hath xxxi dayes.

Last quarter the 4 day, 7 min. past 8 at night.

New moon the 11 day, at high noon.

First quarter the 18 day, 12 min. past 11 before noon.

# SWALLOW.

The latter part of this  
Almanack for the year of  
our Lord God, 1651.

Being the third after *Bissextile*, or  
Leap-year, and from the Conquest of  
*England* by Duke *William*, 585.

Wherein we have a Chronologicall note,  
of some memorable actions; the day  
and hour of the Suns entrance in  
to the four Cardinal Signs; and  
other things related, worthy  
of observation, and fit  
for such a Book.

*Qui sapit, ille animum fortune preparat omni,  
Pravumque potest arte levare malum.*

L O N D O N

Printed by *B. Alsop*, for the Company  
of Stationers, 1651.

# MEMORABLE ACCIDENTS.

O R,

A Chronological Note of many things  
worthy of Memory, shewing how long they  
happned before this year of our Lord

1631.

The last blazing Star,	31
Thomas Parr died, being 152 years old,	76

The

The day and hour of the Suns entrance into the four Cardinal Signs this present year, 1651

And First, Of the Spring,

**T**he Cardinal Signs are Aries, Cancer, Libra, and Capricorn, these being as it were the hinges on which the year hangeth, and by which it is divided into four quarters. These four quarters, among the Jews, were called Tekupha's, or Conversiones anni; two of which fall into the Equinoxes, when the days and nights are equal; and two into the Solstitial points, where in there is as it were Solis statio, because for some days together, the Sun seemeth to stand still, the days not sensibly perceived either to lengthen or shorten. The late Rabbins of the Jews, do most of them begin the year from Autumn, as from its natural head: but the old Christian Fathers of the Church, reckon from the Spring.

The Sign with which this quarter enters, is Aries, into whose first minute the Sun cometh this year, on the 10 day of March, 3 minutes past 2 in the afternoon.

Of Summer.

**T**he next quarter to this, is Summer: the Cardinal Sign belonging to it, is Cancer; into which the Sun entreth this year on the 11 day of June, 52 minutes past 5 in the afternoon.

This word Summer. is in the German tongue, Sun-mehr; that is, Plus solis, or more Sun than at other times.

Of Autumn.

**T**he next after Summer is Autumn; his Sign is Libra, into which the Sun entreth this year, on the 13 day of September, 39 minutes past 8 a clock in the morning. This quarter takes his name from the Latine word, Autumnus, which signifieth to make ripe: Or else it is Autumnus, a bonorum anni augmentatione, from the increase of the earth, now gathered in.

Of Winter.

**W**inter, the last quarter, is in Latine called Hyems, which seems to be derived from the Greek word, *ω*, which signifieth to make

Swallow, 1651.

make moist or wet. His Sign is Capricorn, in  
to which the Sun entred this year on the 11 of  
December, 45 minutes past 7 a clock at night.

And as for the temper of the weather in all  
and every of these quarters, I have already set  
it down (according to what is probable) in each  
several moneth throughout the whole year, and  
shall therefore need to repeat nothing of it here  
again.

Hæc duo Solstitium faciunt, Cancer, Capricornus  
Sed noctes æquant Aries & Libra diebus.

The nature of the 12 Signs, and seven  
Planets.

Aries, Leo, and Sagittarius, are hot and dry signs.  
Taurus, Virgo, and Capricorne, are cold and dry  
signs.

Cancer, Scorpio & Pisces, are wet and cold signs.  
Gemini, Libra, and Aquarius, are windy signs.  
Northern signs are these, Aries, Taurus, Gemini,  
Cancer, Leo, Virgo.

Southern signs these, Libra, Scorpio, Sagitta-  
rius, Capricorne, Aquarius, Pisces.

Saturn is cold and dry, intemperate.

Jupiter is hot and moist, temperate.

Mars is hot and dry, intemperate.

The Sun is hot and dry, temperate.

Swallow, 1651.

Venus is cold and moist, intemperate.

Mercury is variable, according to the nature of that Planet with which he is joyned, or aspected.

Luna the Moon is cold and moist, intemperate.

How the Sun cometh to be Eclipsed.

**A** Eclipse of the Sun is nothing else, but the interposition of the body of the Moon between the Sun and the Earth or between the Sun and our sight.

How the Moon cometh to be Eclipsed.

**T**he Sun never goeth from under the Ecliptick line; but the Moon hath five degrees of latitude on either side of the Ecliptick; at such full Moons then, as the Moon shall be little or nothing in latitude, and under the Ecliptick line, opposite to the Sun diametrically, then will she be Eclipsed, because then there will be an interposition of the Earths dark and grosse body between them, which will shadow the Suns light from the Moon, being of her self but of a duskie shining, without the Suns reflection on her.

This year there will be no Eclipse in our vision

Of a Year.

**I**n all matters Legal, the year begins not with us until the 25 day of March, so that the year which doth begin on the first of January, is the Julian year, instituted by Julius Cæsar.

Of a Day.

A day, in all Legal or Law matters, is accounted but from Sun to Sun: so that one who hath a sum of money to pay on a set day by bond, need not tender his money before or after Sun. This kind of day is that which we call an artificial day; but a day natural is to be accounted from midnight to midnight and so do they reckon on the day for indictments of murder.

Of Matthias in the Leap year.

In every Leap year, the 24 and 25 days of February, in suits at Law, are to be accounted both as one. But for keeping of Fairs those which use to be on the 24 must be kept on the 25 because Matthias is not until the 25 when it is Leap year.

Swallow, 1651,

Of the Prime.

The Moon is said to be primed when she is three days and eighteen hours old, being then in her half quarter and four parts of the compass eastwards from the Sun.

Of the four Cardinal winds, together with their effects, in breeding or bringing Sickness,

**T**he East wind called Subolanus, breedeth in cholerick bodies sharp feavers raging mannesse, and perillous Apostumations, in winter it is ever cold, it bloweth seldome in the night and this one thing is proper to it, if that it be chance to bring rain, it continueth a whole day together.

The South Wind called Auster, is of nature hot and moist: it breedeth corrupt humors and in hot bodies cramps, giddines in the head, or the falling sicknesse, pestilence and cruel fevers.

The West Wind called Favonius, is of nature cold and moist: it breedeth phlegm in moist bodies, it procureth sleep, breedeth Apoplexies and the like. In the spring it greatly refresheth all things, brings abroad the blood, and the sound humors

humors, which lay hid in winter, much refreshing the mind. Whobeit near the end of Autumn, when winter beginneth to approach, it then grows churlish both on sea and land.

The North Wind called Septentrio, is of nature cold, and it is good against the Pestilence, and yet in cold bodies it breedeth plurisies, coughs, gouts, and in some squinances yet of all winds it is held to be wholesomest although it be the sharpest in our winter moneths.

Note that what is spoken thus of their effects, is meant of their long standing in the said quarters.

Know also that a continual still Summer, is a sign of Plague or Earthquake.

Of Blood-letting, and some other Physical Observations.

**I**n youth, let blood from the change to the first quarter.

In middle age, from the first quart. to the full.

In elder years, from the full to the last quart.

And in old age, from the last quart. to the change.

But know that under the age of 14 and above 36 is not good to bleed at all.

Again, in the Canicular or Dog-daies it is very hurtfull to take any phisick, unless there be great

great need: and indeed necessity hath no law.  
Therefore in such a case, the disease being desperate, the cure must be adventured?

Take a purgation when the moon is in Tine  
or Sextile aspect with Venus, decreasing in any of  
these three signs, Cancer, Scorpio, or Pisces, and it  
will be sure to work the better, because when a  
moist planet in a moist sign hath such an aspect,  
the humors in the body are then stirred up and  
down, and so the better purged out. Wherefore  
in this case it cannot be amisse to prepare hu-  
mors by something or other which is laxative,  
and let this be while the moon is either in Ge-  
mini, Libra, or Aquarius.

Take a vomit that it may work thoroughly  
when the moon is in Aries, Taurus, or Capricorn.  
And know that the aspects of the moon in Saturn,  
or Mars, or the moon in Leo, ought to be eschewed,  
in the taking of medicines. Finally, if necessity  
urge no hast, these observations are expedient:  
for it is a plain truth, that the change of weather  
upon differing aspects, doth greatly change and  
alter our bodies,

Things good for the eyes.

**A**LL green colours, cold water, fennel, the  
water of white roses distilled, celandine,  
eye-bright, verbine, agrimony, cloves; and for  
eyes the juice of Hony-suck, softly boyled in the  
shell

Shel of a new laid egg, till it be clean scummed,  
is very good.

Things ill for the eyes.

**T**o look much at red colours, or at fire, to  
read soon after supper to eat garlick, onions,  
radish roots, salt meats, coleworts, and pulse, as  
also to drinke wine that is both thick and sweet;  
smoke likewise and butt be very bad, and to an-  
oint the eyes with Bats-blond will cleane put the  
out: according to the old proverb, The blood of a  
bat will make a man see as well by night, as by day:  
which may well be in him that cannot see at a li

Things good for the Brain.

**T**o smel to camomil, musk, or red roses, to  
wash the temples often with rose water, to  
eat sage measurably, to drinke wine not over-  
much, to keep the body warm, to wash the hands  
often, to walk and sleep measurably, to eat must-  
ard and pepper, and not to be troubled with too  
much noise.

Things ill for the Brain.

**L**ate suppers, much sleep after meat, anger, to  
smell to a white rose, garlick, onions, much  
milk and cheese, to stand long against your use,  
bareheaded, to eat hastily and overmuch, to eat  
too liberally on any kind of brains, much sweat  
in

Swallow, 1651.

in labors of travel, and a besotted practice, of daily  
course of drinking.

Other notes fit to be known.

**N**ote that sixty minutes make an hour. Forty  
five minutes make three quarters of an  
hour. Thirty min. make half an hour. Fifteen  
minutes, make a quarter of an hour. Twelve  
inches make a foot. Three feet, or 36 inch  
es make a yard. Three feet 9 inches, or 45 inch  
es make an ell. Sixteen feet six inches make one  
pole or rod to measure land withall. Forty poles  
make one Furlong. Eight Furlongs make one  
mile.

Observations for Husband-men, and others.

**I**n January take away superfluous branches  
from fruit-trees, and prepare your ground for  
gardens, discover tree trunks, cut your vines in  
some of the twelve days.

Set quick sets, roses, and sallads in the mo  
neth of February. And now cover up the roots of  
your trees with good earth, which you opened in  
the beginning of January.

In March you may graft; but in planting and  
grafting chuse a warm time; wherefore let not  
wind be in the East or North, because such winds  
are commonly nipping, especially being helped by  
an

Swallow, 1651.

aspect of the moon, with Saturn or Venus, in  
the signs; as Virgo, Capricorn, Taurus, Scorpio, Pis-  
ces, or Cancer.

In the end of Aprill, or beginning of May, set  
in sow tender herbs and seeds in your gardens,  
in a good temperature of air.

If you mean to preserve flowers or seeds, ga-  
ther them in a full Moon: let the sun shine first  
upon them and they will keep the better. But  
let them not be dried in the sun, lest the sun draw  
away part of their virtue.

Remove young trees either in the end of October  
or November, or February, the moon increasing:  
be sure to set that side south which was south  
before, because it cannot endure the cold north.

Shear sheep the moon increasing, and their  
wool will grow the better again. The like ob-  
serve for cutting of hair: the moon in Taurus,  
Scorpio or Libra.

Sell cattel the moon in Aries, Sagittarius, Cap-  
ricorn, being in her last quarter.

Gather all fruits that you mean to keep, in a  
time when the moon is at the full.

Sow all such seeds as have round roots, as o-  
nions, leeks, turneps, &c. either three or four  
days before the full, or three or four days after the  
full.

Swallow, 1651

Of many and sundry Fairs in *England*,  
they have heretofore been set forth by others,  
and are now continued for the use of  
many.

*January.*

**T**He 5 day at Hickerford in Lancashire: the 6 day  
Salisbury: the thursday after at Banbury: the 15  
Gravesend, Bristol, Lichfield, Northallerton  
Yorksh. every wednesday from Christmas until June

*February.*

at Northampton, Clithenal in Lancashire, Huntington,  
Malpas in Cheshire: the 29 at Canterbury, Salisbury.

## The Character and Houses of the seven Planets, &c.

- 1 ♄ Saturne, His houses, Capricorne and Aquaria.
- 2 ♃ Jupiter, His houses, Sagittarius and Pifcus.
- 3 ♂ Mars, His houses, Aries and Scorpio.
- 4 ☉ The Sun, His house is Leo.
- 5 ♀ Venus, Her houses, Taurus and Libra.
- 6 ☿ Mercury, His houses, Gemini and Virgo.
- 7 ☾ The Moone, Her house is Cancer.

The Dragons head; ♁

The Dragons rayle; ☊

And note that fuch or fuch a Sign, is called the house of fuch or fuch a Planet; becaufe their Dominat is greater there then elfe where, and fo it is alfo for the houses of the Heavens, when the Sphear is divided into twelve parts.

# Swallow, 1651.

Here followeth the time of the Sun-setting, and length  
of the day, in our latitude of Cambridge.

## January.

Dayes	The sun setteth.	Length of the day.
1	54 min.	3 7 hou. and 48 min.
3	57 min.	3 7 hou. and 54 min.
5	59 min.	3 7 hou. and 49 min.
7	1 min.	4 8 hou. and 8 min.
9	4 min.	4 8 hou. and 8 min.
